

Mexico Follows U.S. Lead, Sends More Federal Security Forces to Border

Mexico City, April 16 (RHC)-- Despite Mexico's anger over U.S. deployment of the National Guard, the government announced similar measures at border with Central American nations. Mexico's government announced it was increasing the number of federal police currently guarding Mexico's southern border in an attempt to prevent undocumented migrants from Central and South America from crossing into Mexico.

On April 4th, U.S. President Donald Trump ordered the deployment of the National Guard to "protect Mexico border" until the border wall he promised during the presidential campaign is built. The announcement was criticized by human rights groups and Mexican President Enrique Peña Nieto, who called the deployment "threatening" and "disrespectful."

Despite Mexico's protests, including the Senate's demand to suspend security cooperation with the United States, the Mexican government is now adopting the U.S. policy and responding to migration through an increase in the presence of security forces in

the states of Chiapas, an entry point for many undocumented migrants.

The border countries of Guatemala and Belize have yet to respond to the announced measure. Interior minister Alfonso Navarrete met with Chiapas Governor, Manuel Velasco, in Mexico City to talk about how to “strengthen the southern border.”

Velasco confirmed “we will strengthen security with more elements of the federal police sent by the interior ministry.” Mexico’s interior minister said there is a need for “a broad framework to protect human rights,” however, no clear strategy was presented.

According to the Latin America Working Group Education Fund “migrants crossing Mexico’s southern border region face a myriad of challenges and are highly in danger of exploitation and abuse ranging from rape and robbery to extortion and assault.”

Furthermore, security forces in Mexico are involved in a series of human rights violations, including rape, torture, kidnapping and murder.
