

The figure was released during a scientific event in Camagüey to assess the drug's efficiency. Cuban researchers and academics are discussing the results over the past twelve months in such provinces as Cienfuegos, Sancti Spíritus, Ciego de Ávila y Villa Clara, with a view to extending its use to other Cuban regions.

A therapeutic alternative, resulting from the combination of two interferons, HeberFERON delays tumor growth and reduces or totally eliminates basal cell carcinoma regardless of type, size or place.
