

UN says Israel demolished 24 Palestinian buildings in less than 2 months

United Nations, August 26 (RHC)-- The United Nations says the Israeli regime has demolished two dozen Palestinian buildings and structures across the occupied West Bank in less than two months.

The UN Office for the Coordination of Humanitarian Affairs (OCHA) said in a new report, excerpts of which were carried by Palestinian Information Center on Sunday, that Israeli authorities demolished 24 Palestinian buildings and structures across the occupied region between July 30 and August 19.

The OCHA said that the recent demolitions displaced nine people and affected at least 80 other Palestinians, adding that the number of people displaced by such demolitions had amounted to at least 480 people so far this year, more than the 472 Palestinians displaced in the entire 2018.

According to the report, within the reported period, 10 buildings were demolished in East Jerusalem al-Quds, and the remaining demolitions were carried out in four communities in the so-called Area C. It said 13 of the demolished structures in Area C were being used for humanitarian purposes, including seven located in a herding community in the northern Jordan Valley.

Area C, which is under full Israeli control, makes up more than 60 percent of the entire occupied West Bank. Eighty eight percent of the area lies in the strategic Jordan Valley, which comprises a third of the occupied West Bank.

The Israeli authorities frequently demolish Palestinian buildings and residences in Area C, with Bedouin and herding communities being particularly vulnerable to that practice.
