

Chloroquine study in Brazil halted after patients develop irregular heart rate

Brasilia, April 13 (RHC)-- In Brazil, a study involving chloroquine's effect on coronavirus patients was stopped after participants developed irregular heart rates, which can increase the risk of potentially fatal arrhythmia.

Donald Trump repeatedly touted hydroxychloroquine, a derivative of chloroquine, to treat COVID-19. One political observer asked that if Trump thinks it's so good, why doesn't he take it?
