

Counterfeit N95 masks sold to U.S. healthcare and government workers

The fake 3M N95 masks seized by U.S. authorities are not only copyright violations, but put unknowing healthcare workers at grave risk of contracting coronavirus. (Photo: U.S. Immigration and Customs Enforcement via AP)

New York, February 12 (RHC)-- Federal authorities in the United States are investigating a massive counterfeit N95 mask operation in which fake 3M masks were sold in at least five states to hospitals, medical facilities and government agencies. The foreign-made knockoffs are becoming increasingly difficult to spot and could put healthcare workers at grave risk for the coronavirus.

These masks are giving first responders “a false sense of security,” said Steve Francis, assistant director for global trade investigations with the Department of Homeland Security’s principal investigative arm. He added: “We’ve seen a lot of fraud and other illegal activity.” Officials could not name the states or the company involved because of the active investigation.

Nearly a year into the pandemic, fraud remains a major problem as scammers seek to exploit hospitals and desperate and weary Americans. Federal investigators say they have seen an increase in phoney websites purporting to sell vaccines as well as fake medicine produced overseas and scams involving personal protective equipment. The schemes deliver phoney products, unlike fraud earlier in the pandemic that focused more on fleecing customers.

3M, based in Maplewood, Minnesota, is among the largest global producers of the N95 mask, which has been approved by the U.S. National Institute for Occupational Safety and Health and is considered the gold standard in protection against the coronavirus. The company delivered some two billion N95 masks in 2020 as coronavirus infections soared, but in earlier months of the pandemic, when masks were in short supply, fraudsters starting popped up.

“They’re not coming from authorised distributors,” said Kevin Rhodes, 3M’s vice president and deputy general counsel. “They’re coming from companies really just coming into existence.” Rhodes encouraged medical facilities and even workers to look on the company’s website for tips on how to spot fakes, namely through packaging or faulty trademarks.

“These products are not tested to see if they make the N95 standards,” he said “They’re not interested in testing them. They’re interested in making as many as they can as cheaply as possible.”

During the pandemic, Homeland Security Investigations has used its 7,000 agents in tandem with border officials, the Food and Drug Administration and the FBI to investigate scams, seize phoney products and arrest hundreds of people to help stop fraud. The effort is based at the National Intellectual Property Rights Coordination Center, a government watchdog aimed at enforcing international trade laws and combating intellectual property theft.

There have already been more than 1,250 raids by law enforcement that resulted in the seizure of 10 million counterfeit 3M masks alone. The company has filed more than a dozen lawsuits over reports of fraud, counterfeiting and price gouging.

There are many other reports of fraudulent masks that have reached front-line workers.

In the latest matter, Homeland Security investigators sent an email warning of potential fraud to certain states. The email, viewed by The Associated Press, said 3M N95 mask models 1860 and 1860S may have been provided by a company called Q2 Solutions and the masks may be fraudulent. The masks have a seal that says “Peru” -- which is not used outside of Latin America. The company is based in Miami, Florida and has offices around the U.S. and globally. It did not respond to requests for comment.

Officials in Washington state examined their mask supply, which had come from a different company, and discovered that 300,000 masks they had purchased for about \$1.4 million were counterfeit. Officials are currently investigating.

Beth Zborowski of the Washington State Hospital Association said the fraud has the potential to affect 1.9 million masks but they are mostly in stockpile now rather than general circulation. She said the mask

supplier had been vetted and the masks “passed all the physical and visual inspection tests.” Zborowski said that for a time, the association could not get the masks directly from 3M, but the company now is expediting its order after learning of the fraud.

Healthcare workers “have plenty of anxieties on a day-to-day basis” and “they don’t need to also worry about whether their masks are fake,” she said.
