Russia, Climate Crisis, flooding, heat wave

Moscow, June 29 (RHC)-- In Russia, torrential rains and heavy winds tore through Moscow on Monday, flooding streets and subway lines and uprooting trees. The violent storm broke a record-setting heat wave that saw Moscow and St. Petersburg reach their highest June temperatures on record.

Last week, a Siberian town above the Arctic Circle known for its extreme cold temperatures recorded a peak ground temperature of 118 degrees Fahrenheit.
