A new Greenpeace report finds only about 5% of all plastic products are recycled in the U.S., with the rest ending up in landfills. In fact, no plastic packaging in the U.S. meets the threshold to be called “recyclable,” according to one well-known standard.

New York, October 27 (RHC)-- A new Greenpeace report finds only about 5% of all plastic products are recycled in the U.S., with the rest ending up in landfills. In fact, no plastic packaging in the U.S. meets the threshold to be called “recyclable,” according to one well-known standard.

Greenpeace said “it is time to accept that plastic recycling is a failed concept.” The group says more viable alternatives such as reuse and refill systems must be quickly scaled up, adding “companies can no

longer use recycling as a smokescreen to divert attention from the systemic changes that are needed.”
