Microsoft and Palantir partner to sell Cloud and AI services to Pentagon

New York, August 9 (RHC)-- Tech giants Microsoft and Palantir announced they are merging their government cloud computing and AI tools to service U.S. defense and intelligence agencies.

Palantir's clients include Immigration and Customs Enforcement, various police departments and the genocidal government of Israel.

According to Palantir's official web site:

Bringing Palantir and Microsoft capabilities to our national security apparatus is a step change in how we can support the defense and intelligence communities," said Shyam Sankar, Chief Technology Officer, Palantir. "Palantir AIP has pioneered the approach to operationalizing AI value – beyond chat — across the enterprise. It's our mission to deliver this software advantage and we're thrilled to be the first industry partner to deploy Microsoft Azure OpenAI Service in classified environments."

"This expanded partnership between Microsoft and Palantir will help accelerate the safe, secure and responsible deployment of advanced AI capabilities for the U.S. government," said Deb Cupp, President of Microsoft Americas. "Palantir, a leader in delivering actionable insights to government, will now leverage the power of Microsoft's government and classified clouds and robust Azure OpenAI models to further develop AI innovations for national security missions."
