

Cuban foreign minister highlights use of nationally produced drugs against COVID-19

Havana, August 15 (RHC)-- Cuban Foreign Minister Bruno Rodríguez highlighted on his Twitter account that of the 16 medicines used in the country against COVID-19, 13 are of national production.

"Of the 16 drugs that make up the #Cuba vs. #COVID19 protocol, 13 are nationally produced, including 7 innovators," wrote the Cuban foreign minister.

"Our biotechnology has contributed to the reduction of serious and critical patients. Despite this, prevention remains the main vaccine."
