The highly contagious Delta coronavirus variant is continuing its rapid spread across the globe, with poor, mostly unvaccinated countries bearing the brunt of its impact.

Nairobi, July 20 (RHC)-- The highly contagious Delta coronavirus variant is continuing its rapid spread across the globe, with poor, mostly unvaccinated countries bearing the brunt of its impact.

Namibia is recording a world record of 28 COVID-19 deaths per 1 million people as infections soar across many African nations.

The World Health Organization is also warning cases are surging in Latin America and the Caribbean as the Delta variant becomes dominant across the region.

In related news, in the United States, Centers for Disease Control and Prevention Director Rochelle Walensky said COVID-19 is “becoming a pandemic of the unvaccinated,” as cases continue to rise in all 50 states — driven by the Delta variant — with the most dramatic increases in areas with low vaccination rates.

Twenty percent of new cases are being reported in Florida alone. U.S. Surgeon General Dr. Vivek Murthy said vaccine refusal puts children under 12, who are not able to get the vaccine, at risk.
